

Abies koreana

Výška	10 - 12 m, slow growing
Šírka	4-6 m
Koruna	narrow pyramidal, dark, dense crown
Kôra a vetvy	bark grey with purple lustre, smooth, later peeling slightly
Listy	dark green needles, 1 - 2 cm, bluish white underneath, evergreen
Kvety	unremarkable, fragrant flowers
Plody	upright cones, cylindrical, violet to steel blue, autumn
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady
Tvar	Vzorový ihličnan
Pôvod	South Korea

A conifer with a narrow, pyramidal shape that grows more slowly than most other *Abies* species. When young, the tree is somewhat irregularly shaped, but later it grows into a very uniform pyramid with an ultimate width of 3 - 4 m. The branches grow closely together, are yellowish grey in colour and have small buds with profuse sap. The dark green needles grow close together, almost forming a brush. *A. koreana* is lovely all year long thanks to the bluish white colour on the underside of the needles. Unlike other *Abies* species, the upright cylindrical cones are 4 - 7 cm long and about 2.5 cm wide, already when the tree is still young. At first, they are still green, but later they take on a violet to steel blue colour. There are several interesting cultivars of *A. koreana* on the market.
