

# Calocedrus decurrens

## 'Aureovariegata'

Výška	20-25 m
Šírka	6-8m
Koruna	columnar, dark, dense crown
Kôra a vetvy	flaking, reddish brown
Listy	variegated, green/yellow, evergreen
Kvety	yellow, flowers in May
Plody	reddish brown
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru
Tvar	Vzorový ihličnan
Synonymum	Libocedrus decurrens 'Aureovariegata'

Calocedrus decurrens 'Aureovariegata' grows less vigorously than the species C. decurrens and will eventually become a broad columnar tree 10 - 15 m tall. The foliage is similar in shape to the species; on red-brown twigs, the fan-shaped foliage grows ever so slightly overlapping. But where the foliage in the species is dark green, in 'Aureovariegata' it is spotted irregularly yellow. Randomly, scales are yellow or green. This is not limited to the young shoots, but can be seen throughout the tree.

Because of its smaller size, 'Aureovariegata' is suitable for use in (large) gardens. It grows in any soil type, including calcareous ones, provided it is not too wet. On wet soils, the tree is more likely to be affected by Phytophthora.

This old cultivar was found in Germany around 1904. Hardiness zone: 7a
