

Cedrus deodara 'Pendula'

Výška	up to 5 m
Šírka	5-8m
Koruna	broad weeping, dark, dense crown, capricious growing
Kôra a vetvy	first grey and smooth, later becoming rough
Listy	bundles, evergreen
Kvety	unremarkable, fragrant flowers
Plody	reddish brown cones, 8 - 12 cm, 1 to 2 together
Tárne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutrient-rich, well-permeable, acidic soils
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7b (-14,9 do -12,3 °C)
Odolnosť voči vetru	moderate
Použitie	priemyselné oblasti, malé záhrady
Tvar	Vysokokmeň, Vzorový ihličnan
Pôvod	Germany, approx. 1850

Broad, weeping cultivar with branches hanging down to the ground. If this Cedrus is not trained to grow upwards, it grows into a broad, spreading plant that is broader than it is high. If the branches are trained upwards, an irregular, broad, weeping shape develops. This makes 'Pendula' eminently suited as a solitary tree. The dark, blue-green needles grow in groups, with up to 30 bundled together. The ovoid, upright cones grow singly or in pairs and have a round top. 'Pendula' saplings are particularly sensitive to frost, requiring a sunny site sheltered from wind. Does not thrive well in high-pH soils.
