

Cedrus deodara 'Robusta'

Výška	12 - 15 m
Šírka	10-12m
Koruna	broad pyramidal, half-open crown
Kôra a vetvy	first grey and smooth, later becoming rough
Listy	needles in bundles, dark bluish green, up to 8 cm, evergreen
Kvety	unremarkable, fragrant flowers
Plody	reddish brown cones, 8 - 12 cm, 1 to 2 together
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	nutrient-rich, well-permeable, acidic soils
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7b (-14,9 do -12,3 °C)
Odolnosť voči vetru	moderate
Použitie	bulváre a široké ulice, priemyselné oblasti
Tvar	Vzorový ihličnan
Pôvod	unknown

This is a cultivar with horizontal lateral branches that are irregularly pendulous at the end. The tree grows out very broadly and develops a broad, pyramidal crown. The crown is more open than those of the species. The needles grow in groups, with up to 30 bundled together. They are dark, bluish green and remarkably longer than those of the species and other cultivars: up to 8 cm. The ovoid, upright cones grow singly or in pairs and have a round top. Saplings are particularly sensitive to frost, requiring a sunny site sheltered from wind. Does not thrive well in high-pH soils.
