

Cedrus libani 'Fastigiata'

Výška	20 - 25 (40) m
Šírka	6-10m
Koruna	narrow pyramidal, dark, dense crown
Kôra a vetvy	dark greyish black bark, scaly, twigs have downy hair
Listy	needles, blue-green, 2 - 2.5 cm, evergreen
Kvety	unremarkable, fragrant flowers
Plody	barrel-shaped cones, 5 - 7 cm long, turning from green to brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, provided well-permeable and not too moist
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné vetru
Použitie	priemyselné oblasti
Tvar	Vysokokmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Lalande, Nantes, France, 1885

A densely branched cedar that grows straight upwards. The branches slant upwards, keeping the crown pyramidal, making this tree well-suited for small spaces. This is the biggest difference with *C. libani* subsp. *atlantica*. The trunk is first grey and smooth but becomes rougher as the tree ages. Later, the bark flakes off in small plates, revealing the reddish brown bark. The branches are dense and close together, twigs are first greyish green to greyish brown but turn grey in the second year. The needles, 2 - 2.5 cm long, grow in bundles of 20 - 40 together. They are a remarkable greyish blue colour. Upright cones appear in autumn. Young cones are green but turn purplish brown to brown later. This cedar requires ample sun and is highly tolerant of air pollution.
