

Chamaecyparis lawsoniana

'Imbricata Pendula'

Výška	5 - 6 m
Šírka	4-5m
Koruna	broad, weeping, light, open crown, capricious growing
Kôra a vetvy	twigs brown, bark reddish brown with peeling plates
Listy	pointed scales, green, twigs gracefully drooping, evergreen
Kvety	inconspicuous, ? pinkish red, fragrant flowers
Plody	round cones, reddish brown, 0.8 cm, in small bunches
Tŕne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	well-drained, humic, no lime
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	malé záhrady
Tvar	Vzorový ihličnan
Pôvod	R.E. Harrison, Palmerston, New Zealand, 1959

Elegant tree with loose branching that after many years will reach a height of 5 - 6 m. Forms an upright central leader from which widely spreading lateral branches and gracefully drooping twigs grow. The bark is reddish brown and peels in long fibrous plates when mature. The young twigs are brown and flattened. The scaly foliage is dark grey-green and has a loose structure. This cultivar was selected in 1930 from seedlings, but it was not until 1959 that the tree was introduced. Afterwards the tree was forgotten for a long time until Don Teese (Monbulk, Australia) brought it back to people's attention. Grows on any soil provided it is humic and well drained. Cannot tolerate lime.
