

Chamaecyparis obtusa 'Nana Gracilis'

Výška	1-3 m, slow growing
Šírka	2-2,5m
Koruna	broad ovoid, dark, dense crown, capricious growing
Kôra a vetvy	brown, grey
Listy	green, evergreen
Kvety	unremarkable, fragrant flowers
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, peaty soil, acid soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Použitie	strešné záhrady, pobrežné zóny, priemyselné oblasti, malé záhrady, dvory
Tvar	Vzorový ihličnan

Unmistakable shrubby conifer that will only reach a height of more than 2 m in old age. The scaly foliage stands in typical, shell-shaped tufts planted at different angles on thicker twigs. Because the foliage is glossy dark green and the young growth tips light green, these shapes are enhanced. The result is a highly ornamental plant that lives up to the name Gracilis. 'Nana Gracilis' is a slow-growing plant, wrongly labelled as a dwarf conifer. Therefore, the plant is not very suitable for small rock gardens and troughs.

Was named just after the mid-19th century and is to this day an excellent and widely cultivated cultivar.
