

Cupressus sempervirens

Výška	20 – 30 (40) m
Šírka	4-6m
Koruna	columnar to broad fan-shaped, dark, dense crown
Kôra a vetvy	twigs grey-brown, bark grey, slightly grooved
Listy	rounded, contiguous scales, matt dark green, evergreen
Kvety	inconspicuous, yellow
Plody	round with slightly elongated cones, green to bluish purple, 2 - 3 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any well-drained soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	8a (-12,2 do -9,5 °C)
Odolnosť voči vetru	good, tolerates sea wind but not cold, drying wind
Ostatná odolnosť	Odolné vetru
Použitie	bulváre a široké ulice, úzke ulice, pobrežné zóny
Tvar	Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Eastern Mediterranean coastal area, Eastern North Africa, Asia Minor, Northern Iran

Large tree whose habit varies from very narrow columnar to broad horizontal fan-shaped. The various clones can sometimes be distinguished by the invalid epithets f. horizontalis for the broad shape and f. sempervirens or f. stricta for the columnar shape. In practice the narrow columnar shape is usually meant. It can grow to 20 to 30 m tall, or even to 40 m in some cases. The bark is grey and slightly grooved when mature. The scaly foliage consists of small, matt dark green contiguous scales. The cypress grows on any soil provided it is well drained. Tolerates a lot of wind, including sea wind, but has poor tolerance to cold, drying wind. The limited winter hardiness means this tree is only suitable for mild climatic zones and in sheltered sites such as patios, atriums and courtyards.
