Small tree with a small spherical crown and fairly dense branching. If grown as a shrub, it will grow about 1.5-2 m high. Grafted on a tall stem, the tree will grow about 4 m high. Like the species, the twigs are light brown and smooth. The old bark is grey-brown and grooved in later life. The fan-shaped leaves are up to 10 cm long and often slightly broader. In autumn, the leaves turn yellow before falling off. This Hungarian selection has a somewhat awkward original cultivar name and is usually found under the trade name GLOBUS. Suitable as a standard globe tree for use in gardens and squares.
