

Ginkgo biloba 'Tubifolia'

Výška	2 - 4 m
Šírka	2-4m
Koruna	broad fan-shaped, light, open crown, capricious growing
Kôra a vetvy	twigs light brown, bark grey-brown, later deeply grooved
Listy	fan-shaped and curled into tubes, in clusters of 3 - 5, up to 5 cm long and wide, green
Jesenné sfarbenie	Žltá
Kvety	green, inconspicuous, April/May
Plody	fruitless cultivar
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	fairly to good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokmeň, Vetvený, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Coenosium Gardens, Eatonville, WA, USA, before 1990
Synonymum	Ginkgo biloba 'Tubeleaf'

Slow-growing broad shrub type. Eventually grows into a small tree from 2 to 4 m tall, with a broad, fan-shaped crown. The crown is about as wide as it is tall. Twigs are light brown and smooth, mature bark is grey-brown and deeply grooved when older. The fan-shaped leaves of the first sprouting curl into a typical tube shape making them look like small cups. This curvature makes the matt green underside of the leaf visible. The leaves of the second sprouting, later in the summer are often dissected. The leaves are distinctly smaller than the species, growing to about half as long. In autumn the leaf turns yellow before falling. This small tree is unmistakable due to the striking leaf shape and is suitable for (small) gardens.
