

Larix decidua

Výška	25 - 35 (45) m, fast growing
Šírka	12-15m
Koruna	narrow pyramidal when young, later broad pyramidal, light, open crown, capricious growing
Kôra a vetvy	dark greyish reddish brown, scaled, twigs yellowish and bare
Listy	needles in bundles of up to 40, bright green, 1 - 3.5 cm
Jesenné sfarbenie	Žltá
Kvety	ovoid ? 1 - 1.5 cm reddish brown, ? 0.5 - 1 cm yellowish, April
Plody	ovoid cones, 2 - 5 cm, dark red at first, later dark brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, apart from acidic soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	3 (-40,0 do -24,5 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Tvar	Vysokokmeň, Vetvený, Viackmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Europe
Synonymum	Larix europaea

Deciduous conifer with a straight trunk and regular manner of growth with side branches growing horizontally. First the crown is narrow, but later becomes broadly pyramidal. It is a fast grower that can reach heights of 30 m or more. Width approx. 15 m. The bark is dark reddish brown, scaly and up to 10 cm thick. Young twigs are bare, yellowish and hang down sharply. The needles grow in bundles of 30 - 40 together on short shoots. They are a fresh green colour particularly in the spring and colour to golden yellow late in the autumn. The cones contain 40 - 50 seed scales that do not have a curved edge, as opposed to *L. kaempferi*. Requires a free-standing site in the sun. Naturally occurring in the Alps and now used often in forestry areas.
