

Larix kaempferi 'Pendula'

Výška	5 - 7 m
Šírka	3-5m
Koruna	broad, weeping, dark, dense crown, capricious growing
Kôra a vetvy	twigs brown-red, bark grey-brown to reddish brown, scaling
Listy	needles, on short shoots in clusters, single on long shoots, dark green, 2 - 3 cm
Jesenné sfarbenie	Žltá
Kvety	inconspicuous ? 0,5 - 1 cm, yellowish, ? reddish brown, 1 - 1.5 cm, April
Plody	oval to round cones, 2 - 3 cm, yellowish brown
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any except acidic soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	pobrežné zóny, priemyselné oblasti, malé záhrady
Tvar	Vysokokmeň, Vetvený, Vzorový ihličnan
Pôvod	Herm. A. Hesse, Weener, Germany, before 1896

A relatively slow-growing, deciduous, broad weeping tree that can eventually grow to 5 to 7 m tall. The tree produces upwardly winding main branches and heavily drooping lateral branches. Like the species the twigs are brownish red. The quite thick mature bark is grey-brown to reddish brown, later scaling. The soft needles are in clusters of 40 - 50 on short shoots along the older branches. On (year-old) long shoots, they stand alone. They are 2 to 3.5 cm and dark green. In autumn, they turn golden yellow before falling off. It is not easy to find a place for this particularly graceful cultivar because of its broad, weeping growth habit. The tree is best suited to parks and large gardens. Grows on any soil except acidic.
