

Picea pungens 'Glaucia Globosa'

Výška	4 m
Šírka	1-2m
Koruna	flatened spherical, dark, dense crown
Kôra a vetvy	brown, grey
Listy	greengreen, bluegreen, evergreen
Kvety	unremarkable, flowers in May
Plody	green, yellowbrown
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, acid soil, calcareous soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokmeň, Vzorový ihličnan

Picea pungens 'Glaucia Globosa' is a shrub form with an irregular, bulbous to flattened spherical growth habit. Does not usually grow much higher than about 2 m. Twigs yellowish brown, older branches and bark greyish brown to blackish grey. The stiff sharply pointed needles are blue-grey. Needle colour is less intense than in cultivars such as 'Erich Frahm' and 'Hoopsii'. The needles are close together giving the plant a very dense and compact appearance. Suitable for use in gardens, parks, planters, cemeteries, etc. 'Glaucia Globosa' was grown in 1937 by Anth. Kluys in Boskoop as a seedling. Only from 1955 was the plant distributed. Hardiness zone: 4
