

## Pinus contorta

<b>Výška</b>	10 - 20 (25) m
<b>Šírka</b>	6-8m
<b>Koruna</b>	broad pyramidal, half-open crown, capricious growing
<b>Kôra a vetvy</b>	bark yellowish brown and peeling, twigs bare and brownish yellow
<b>Listy</b>	needles, 2 together, twisted, dark green, 3 - 5 cm, evergreen
<b>Kvety</b>	unremarkable, ? light brown, ? purple, fragrant flowers
<b>Plody</b>	hanging cone, 2 - 5 cm, remain on the tree very long
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	all
<b>Pôdna vlhkosť</b>	Vhodné do suchých pôd
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	5a (-28,8 do -26,1 °C)
<b>Odolnosť voči vetru</b>	good
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6), Odolné vetru
<b>Stromy pre zvieratá a hmyz</b>	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
<b>Použitie</b>	pobrežné zóny, priemyselné oblasti
<b>Tvar</b>	Viackmeň, Vzorový ihličnan
<b>Pôvod</b>	northern and western North America

In its region of origin, the tree grows to about 25 m, but it is often smaller when cultivated. *P. contorta* has an irregular pattern of growth, usually with multiple main trunks. As a result, the crown is often irregular and bushy. When young, it is still straight, and later it broadens with hanging branches, width of 6 - 8 m. When growing freely on its own, the tree is full all the way down. The yellowish brown bark is thin and peeling. The dark green needles are light underneath, they are twisted and grow in pairs. When closed, the hanging, slightly curved cones sometimes stay on the tree for up to 10 years. This does not have any detrimental effect on the seeds ability to germinate. Planted often for timber production. Is not very demanding when it comes to soil and even grows on poor, dry, sandy soil. Suitable for coastal areas. *Pinus contorta* is an important producer of timber. The tree makes very few demands on the soil and is thus planted in huge numbers.
