

Pinus heldreichii

Výška	25 (30) m
Šírka	8-12m
Koruna	broad oval, dark, dense crown
Kôra a vetvy	twigs brown-grey to light brown, bark grey-brown, thick and deeply grooved
Listy	stiff needles, curved towards the twig to straight, 2 together, 6 - 11 cm, glossy dark green, evergreen
Kvety	? in clusters by the young shoots, bright yellow, fragrant flowers
Plody	cones, 6 - 10 cm long, 4 - 6 cm wide
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, tolerates limy soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady
Tvar	Vysokokmeň, Viackmeň, Vzorový ihličnan
Pôvod	Bulgaria, Bosnia and Herzegovina, Northern Greece and Southern Italy
Synonymum	Pinus leucodermis, Pinus heldreichii var. leucodermis

A beautifully shaped large tree, growing up to 20 m tall with dense branching. The crown is broad oval although it can become irregularly round on older trees. The thick, mature bark is grey-brown and deeply grooved revealing the light brown-yellow bast. The German name Schlangenhaut-Kiefer refers to this feature. The tips of the stiff, glossy, dark green needles are usually curved towards the twigs. They are in twos, 6 to 11 cm long and encased at the base by a grey, papery membrane. The oval to narrow oval cones are in twos or threes on short stems. First they are dark green to bluish purple, turning matt light brown to grey when ripening. A variable species which is often still found under the synonym P. leucodermis or P. heldreichii var. Leucodermis. Has few demands as to soil, tolerates limy soil and wind.
