

Pinus wallichiana

Výška	15 - 30 (50) m
Šírka	10-20m
Koruna	broadly pyramidal, later spreading out very broadly, half-open crown, capricious growing
Kôra a vetvy	dark grey and flaking, twigs bare and covered with a bluish frosting
Listy	hanging needles, 5 together, soft and thin, bluish grey, bent, evergreen
Kvety	unremarkable, ? pale yellow, ? on a short stem, reddish, fragrant flowers
Plody	upright cones, later hanging, single, 15 - 25 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	well-permeable, somewhat acidic
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	moderate
Stromy pre zvieratá a hmyz	Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti
Tvar	Viacmeň, Vyvetvený ihličnan, Vzorový ihličnan
Pôvod	Himalayan mountains
Synonymum	Pinus griffithii

Particularly lovely species with an open crown. Especially striking thanks to its long, hanging needles. The crown has a broad, pyramidal shape at first, but later it spreads out very broadly with horizontally protruding branches. When growing freely on its own, the branches stay on the tree all the way down to the ground. In its natural habitat, the tree can grow to a height of 50 m, but it is usually smaller when cultivated. The trunk is smooth and dark grey at first, but later flaking off in plates. The blue frosted needles are bent, remarkably long and thin and hang straight down, particularly from young twigs. Young cones are upright, but later they hang down as well. They are 15 - 25 cm long and 3 - 5 cm thick. Young trees, in particular, require support in windy sites and are sensitive to frost. Tolerates dry conditions.
