

## Taxodium distichum

<b>Výška</b>	18 - 30 (50) m
<b>Šírka</b>	5-10m
<b>Koruna</b>	narrow pyramidal when young, later broader, half-open crown
<b>Kôra a vetvy</b>	reddish brown, fibrous, grooved bark, young twigs are green
<b>Listy</b>	needles, soft green, spiralling around twig, 1 - 2 cm long
<b>Jesenné sfarbenie</b>	Oranžová, Červená
<b>Kvety</b>	unremarkable
<b>Plody</b>	ovoid cones, Ø 2 - 3 cm, first green, later brown
<b>Tréne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	moisture-retentive to swampy, can also be moderately dry
<b>Pôdna vlhkosť</b>	Vhodné do vlhkých pôd, Odolné voči krátkodobému zaplaveniu, Odolné voči dlhodobému zaplaveniu
<b>Spevnené plochy</b>	Toleruje čiastočné spevnenie
<b>Zóna odolnosti</b>	6a (-23,3 do -20,6 °C)
<b>Odolnosť voči vetru</b>	very good
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1-6), Odolné vetru
<b>Použitie</b>	priemyselné oblasti
<b>Tvar</b>	Vysokokmeř, Vетvený, Vyvetvený ihličnan, Vzorový ihličnan
<b>Pôvod</b>	south-eastern North America

Deciduous conifer that remains narrow pyramidal for a long time but ultimately grows to a width of 7 – 10 m. Mature trees growing in or near water form roots that protrude above the ground like stalagmites. They can attain a width of approx. 30 cm. and a height of 1 m. The fibrous trunk is very knotty and grows very broad at the bottom. It twists in an anti-clockwise spiral. Young shoots and short shoots are green. These short shoots are 5 - 10 cm long, with erect, spreading needles. This is in contrast to Metasequoia, the needles of which are opposing. The short shoots and needles fall off at the same time in the autumn. The needles on long shoots are scaly and protrude in a radial, spiral shape. The autumn colour is orange-brown to reddish brown. It is a monoecious tree with ovoid, green cones that appear after flowering and turn brown when ripe. Tolerates long periods of submersion under water.
