

Taxus baccata

Výška	10 - 15 (20) m
Šírka	8-12m
Koruna	ovoid to round, irregular, dark, dense crown
Kôra a vetvy	bark thin and brownish red, flaking, deep grooves
Listy	needles, deep dark green, 1.5 - 3 cm, evergreen
Kvety	unremarkable, dioecious, ? yellow buds, ? green
Plody	brownish black seeds, covered 4/5 with a fleshy, red case
Trne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	well-permeable
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, dvory
Tvar	Vysokokmeň, Viackmeň, Vyvetvený ihličnan, Vzorový ihličnan, Ihličnan na živý plot
Pôvod	Europe, North Africa, Western Asia, Caucasus

Usually large bush that grows into a small tree. Growth is slow, but the tree can eventually attain a height of approx. 15 - 20 m and a width of approx. 12 - 15 m. The crown is irregularly shaped. The short, brownish red trunk becomes thick and flakes off when the tree is old. Old branches hang down steeply and sometimes touch the ground. Young twigs are green. The needles are opposed on horizontally protruding twigs and spiral around vertically growing twigs. Striking fruit appears after unremarkable flowering: The seeds are covered 4/5 by an oval, fleshy, red case that is 0.6 – 0.7 cm long. Although the fleshy part of the fruit is not poisonous, the seeds and needles are. The plant is perfect for clipping into hedges or other shapes.
