

Taxus baccata 'Fastigiata Aureomarginata'

Výška	4-6 m
Šírka	1-2m
Koruna	columnar, dark, dense crown
Kôra a vetvy	flaking, reddish brown
Listy	variegated, off white/ green, evergreen
Kvety	yellow, flowers in April
Plody	fruitless cultivar
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, acid soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vzorový ihličnan
Synonymum	Taxus baccata 'Fastigiata Aurea', Taxus baccata 'Fastigiata Mediovariegata'

A small tree that is narrow columnar at first, but spreads out later. At around 3 m it remains significantly smaller than the green T. baccata 'Fastigiata'. Its compact growth means it produces a very dense crown. The branches grow straight up. The young twigs are green-yellow, the old bark is brown-red and flaking. The yellow to creamy white variegated needles are arranged in a spiral and around 3 cm long and 0.3 cm wide. The blossom is male so no fruit is produced. Suitable for parks, cemeteries and gardens. It is also found under the synonyms 'Fastigiata Aurea' and 'Fastigiata Mediovariegata'.
