

## Acer palmatum 'Atrolineare'

Výška	4 m
Šírka	3-4m
Koruna	oval to vase-shaped, dark, dense crown, capricious growing
Kôra a vetvy	smooth, grey-brown
Listy	palmatifid with 5 to 7 narrow leaf segments, dark purplish green
Jesenné sfarbenie	Oranžová, Červená
Kvety	red flower corymbs, May
Plody	fruitless cultivar
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, except clay, and not too dry
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6 (-23,3 do -17,8 °C)
Odolnosť voči vetru	moderate to poor
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Fritz Graf von Schwerin, Trebbin, Germany, 1893
Synonymum	Acer p. 'Linearilobum Atropurpureum'

Vertical bush that eventually attains approx. 4 m height but will not acquire a genuine tree form. Most notable characteristic is the very small leaf lobes. The mature leaves of the first outgrowth are 7 - 9 cm long and the leaf lobes only 2 - 5 mm wide. The leaves of the second outgrowth are somewhat larger and have significantly broader lobes, sometimes up to 1.5 cm wide. The lobes will become narrower as these leaves mature. The young leaf is blackish-red, turning to purplish green in summer. Among the small-leaved cultivars, the vertically growing 'Atrolineare' is atypical. All the other small-leaved varieties have a broader and lower growth pattern.
