

Acer pseudoplatanus 'Erectum'

Výška	20 - 25 m
Šírka	6-10m
Koruna	egg-shaped, wider with age, dark, dense crown
Kôra a vetvy	bark grey, branches grey to olive-green
Listy	5 lobes, green, up to 30 cm, in autumn matt golden yellow
Jesenné sfarbenie	Žltá
Kvety	yellow-green, in pendent racemes, April
Plody	winged nutlets (samara), 3 - 3.5
Trne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	any soil
Pôdna vlhkosť	Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	bulváre a široké ulice, pobrežné zóny, priemyselné oblasti
Tvar	Vysokokmeň
Pôvod	The Hague, The Netherlands, 1955

Medium-sized to large tree, reaching a height of 25 m. A tree that is very easy to maintain and requires little pruning. Juvenile trees have a columnar shape, but are in maturity growing wider with more spreading branches. The juvenile shoots are light green. The shallowly lobed leaf is larger than of the species and has short, thick leaf stalks with an almost straight leaf base. Flowers are of the species, appearing while the leaf emerges. Abundance of fruit. 'Erectum' was selected in 1955 by the well-known dendrologist Doorenbos. The original tree was planted as a seedling on the Nachtegaalplein in The Hague (NL). It is a good street and avenue tree, well suited for application in cities. Deep rooting with good branching. 'Erectum' demands little from the soil; tolerates wet and cold soils. Wind and sea wind resistant.
