This cultivar from Belgium has been named after king Leopold. It is a healthy growing tree with a wide pyramidal crown. The tree can reach from 14 m up to 20 m and its leaf colour is quite striking. Juvenile foliage is pink, later it turns white and yellow speckled. Flowers are of the species, emerging while the leaves unfurl in April. 'Leopoldii' is one of the better variegated maples, applied on a large scale. The tree is used as a park tree and solitary. It requires little from the soil and is wind resistant. Winter hardiness zone: 4
