Synonymum	Acer rubrum 'Indian Summer'

Dense, oval to wide oval crown. Vigorously growing, reaching a height of circa 20 m. Young twigs are red brown. The leaf stalk is red-brown too. The leaf is bright green and can be 10 cm. The underside of the leaf is blue-green. In comparison to other cultivars, it has a spectacular autumn colouring in orange-red hues. Juvenile trees already have this colouring. This autumn colour remains well into autumn. A male variety without any flowers or fruits. Limy soil stunts the growth. In dry soils no autumn colouring. Poor tolerance to (sea) wind. Winter hardiness zone: 4
