

Acer rubrum 'October Glory'

Výška	15 - 18 m
Šírka	8-10m
Koruna	wide oval to round, dark, dense crown
Kôra a vetvy	grey trunk, dark red twigs
Listy	palmate, lobed, dark green, ca 10 cm
Jesenné sfarbenie	Červená
Kvety	red, in small umbels, March/April
Plody	winged nutlets, ca 2 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	moist soil, certainly not calcareous
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Viackmeň
Pôvod	Princeton Nurseries, New Jersey, USA, 1961

Medium-sized tree with an evenly branched, dense crown, tapered at the top. At maximum height circa 10 m across. Young twigs are red-brown. The leaf stalk of the dark green leaf, is red too. The leaf is circa 10 cm and is thicker than of the species, the underside is blue-green. The autumn leaves turn into dark red and remain on the tree a long time. Of all A. rubrum cultivars this one changes colour almost last. The female inflorescence appears before the leaves. Fruits ripen early in summer and drop soon. The tree develops a sturdy main root with many fibrous root branches. In limy soil the growth stunts. In this soil and in soil that is too dry, there is no colouring in autumn. Poor tolerance to (sea) wind. In severe winters the cold wind may be harmful.
