

Aesculus ×carnea 'Briotii'

Výška	15 (20) m
Šírka	10-15m
Koruna	round to wide pyramidal, dark, dense crown
Kôra a vetvy	grey-green, with light vertical grooves, non-sticky buds
Listy	usually 5 leaflets, dark green, circa 15 cm
Kvety	dark red, erect panicles, May
Plody	few, less prickly than the A. hippocastanum
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	all, preferably not too dry
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Viackmeň
Pôvod	Trianon, France, 1858

Crossing between A. hippocastanum and A. pavia. The dense crown casts a dark shade. A mature tree seldom reaches higher than 15 m and gets circa 15 m wide. 'Briotii' grows slower than the species. The slightly shiny, opposite leaves are more folded than those of A. x carnea and can reach 15 cm across. They appear early, remain long on the tree and have a yellow brown autumn colour. The midrib is tinted red at the origin. The blood-red flowers do not appear until the tree is 8 to 10 years old and are bigger than those of the A. x carnea. The fibrous root system consists of a main root which branches out well and goes deep into the ground. The ground must not be too dry. Intolerant to asphalt surfaces unless the base area is large enough.
