

Aesculus glabra

Výška	15 - 20 m
Šírka	10-15m
Koruna	round, dark, dense crown
Kôra a vetvy	grey, older bark grooved and scaling in thin platelets, buds are non-sticky
Listy	5-fingered, green, 3 - 7 cm
Jesenné sfarbenie	Oranžová
Kvety	Pale yellow-green, 2 – 3 cm long, in 10 – 15 cm long panicles, May
Plody	with very short spines, 3 – 5 cm in size, poisonous
Tríne	Žiadny
Jedovatosť	Má jedovaté časti
Typ pôdy	few soil requirements
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Tvar	Vysokokmeň
Pôvod	USA, east of the Rocky Mountains

Large tree with a rounded crown. The young shoot is reddish brown, the older twigs are grey. The older bark is rough and sheds in thin scales. The twigs smell unpleasant when bruised. It is the only species with more or less spiky fruit that is native to North America. The green leaf sometimes turns a beautiful orange in autumn. The flowers are pale yellow to yellow-green, and stand in poorly-flowering panicles. They are not very conspicuous. A typical characteristic is that the stamens extend outside the flowers. Because of the size and breadth of the crown, this tree is mainly suitable for parks.
