

Aesculus hippocastanum

'Pyramidalis'

Výška	10 -20 (25) m
Šírka	6-8m
Koruna	conical to narrow pyramidal, when maturing wider to ovate, dark, dense crown
Kôra a vetvy	thin, brown and smooth bark, sticky buds
Listy	palmate, 5/7 leaflets, dark green, circa 20 cm
Kvety	white, in erect panicles, May/June
Plody	prickled, 1 to 3 shiny brown chestnuts, fewer than of the species
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few requirements, tolerant to hard surfaces, no asphalt
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	4 (-34,4 do -28,9 °C)
Odolnosť voči vetru	moderate to good
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Použitie	bulváre a široké ulice
Tvar	Vysokokmeň, Viackmeň
Pôvod	Germany, 1891

This cultivar grows a little slower than the species. The branching out is, in contrast with the species, diagonally upwards (a crotch angle of 45°) keeping the crown considerably narrower. When maturing the crown becomes wider and will be ovate. The tree rarely becomes wider than 6 m. The thick twigs are 2 cm across and quite striking. The opposite leaves can reach 20 cm across. In autumn they turn into yellow brown. The flowering is large and profuse, white panicles of circa 20 cm. Also striking is the colouring from yellow into red of the macule (spot in the flower). The tree has a deep rooting main root that branches out sturdily. In spite of the considerable size, this cultivar is more suitable for use in wide streets and avenues than the species. Susceptible to salt (for icy roads).
