

Alnus incana 'Pendula'

Výška	6 - 8 m
Šírka	3-5m
Koruna	wide weeping, half-open crown
Kôra a vetvy	grey and smooth, twigs grey brown
Listy	ovoid, dark green, 5 - 10 cm
Kvety	catkins Y, and ?, purplish, February/March
Plody	ovate strobiles, grey brown
Tŕne	žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcicole, tolerates dry soil
Pôdna vlhkosť	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu, Odolné voči dlhodobému zaplaveniu
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	2 (-45,5 do -40,1 °C)
Odolnosť voči vetru	good, susceptible to sea wind
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	stromy do nádob, strešné záhrady, priemyselné oblasti
Tvar	Vysokokmeň
Pôvod	Van der Bom, Oudenbosch, The Netherlands, before 1900

Small to average-sized tree with upright trunk and drooping branches. This creates a nice weeping form with wide pendulous branches. The trunk and the young twigs are grey. In contrast to *A. glutinosa*, *A. incana* has no sticky parts. The alternate leaves are ovoid and acuminate. They have a boldly toothed margin and the underside is velvety haired. The buds have short stalks. 'Pendula' has an inconspicuous inflorescence of female catkins, + 0.5 cm long and male catkins with yellow pollen, + 7 cm long. In September the grey brown strobiles appear and decorate the tree all winter. The tree has a deep-rooting main root, but remains more shallow than the *A. glutinosa*. Intolerant to hard surfaces.
