

Amelanchier arborea 'Robin Hill'

Výška	5 - 10 m
Šírka	3-4m
Koruna	oval, later broader, half-open crown
Kôra a vetvy	grey-brown, smooth to slightly grooved
Listy	reverse ovoid to oval, dark green, 3 - 7 cm
Jesenné sfarbenie	Žltá, Červená
Kvety	clusters, pink in the bud, later white, early April
Plody	first dark red, later black, small, edible fruits
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	makes very few demands on the soil, prefers calcareous soil
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	very good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Použitie	bulváre a široké ulice, úzke ulice, stromy do nádob, strešné záhrady, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokeň, Viackmeň
Pôvod	Robin Hill Arboretum, Lyndonville, New York, before 1970

Small tree with a striking winter silhouette thanks to the fine branching pattern. In the winter, the grey colour of the bark is striking. The reverse ovoid to oval, densely haired leaves have a pointy top and are dark green on the top and greyish green underneath. They turn spectacular yellow and red tints in the autumn. The flowers are in large, loose, pendulous clusters. When in the bud, they are pink, but turn completely white when open. The warmer the weather, the whiter the colour of the flowers. Berries appear in the autumn and turn from a dark red colour to black. 'Robin Hill' produces very little fruit. The tree has a fine root system close to the surface. It places little demands on the soil, prefers slightly calcareous soil that is not too wet.
