

Amelanchier rotundifolia

Výška	2 - 3 m
Šírka	2-3m
Koruna	broad ovoid, half-open crown
Kôra a vetvy	light grey, smooth
Listy	narrow oval to almost round, grey-green, 2 - 4 cm
Kvety	creamy-white, 1.5 - 2.5 cm, in erect racemes, mid-April/early May
Plody	blue-black, pruinose, 0.5 - 1 cm, edible, edible fruits
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few soil requirements, prefers calcareous
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Central and southern Europe, North Africa and western Asia
Synonymum	Amelanchier ovalis Medik

Very variable species that usually grows as a shrub but can eventually grow into a small tree with a broad, ovoid crown. On emerging, the leaf has woolly hairs on the underside. These hairs disappear in the summer. The grey-green leaves vary in shape from a narrow oval to nearly round. The change of colour in autumn is not very spectacular; the leaf turns somewhat purplish red. The creamy white flowers open in erect racemes. They are of average size. The edible fruits are red at first, turning blue-black on ripening. Amelanchier has few soil requirements but grows best in calcareous soil.
