

## Betula pendula FASTIGIATA JOES ('Jolep1')

|                            |                                                                              |
|----------------------------|------------------------------------------------------------------------------|
| <b>Výška</b>               | 15-20 m                                                                      |
| <b>Šírka</b>               | 3-4m                                                                         |
| <b>Koruna</b>              | columnar, half-open crown                                                    |
| <b>Kôra a vetvy</b>        | flaking, white                                                               |
| <b>Listy</b>               | green                                                                        |
| <b>Jesenné sfarbenie</b>   | Žltá, Oranžová                                                               |
| <b>Kvety</b>               | yellowgreen, flowers in April                                                |
| <b>Plody</b>               | brown                                                                        |
| <b>Tŕne</b>                | Žiadny                                                                       |
| <b>Jedovatosť</b>          | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                          |
| <b>Typ pôdy</b>            | clay soil, loamy soil, sandy soil, peaty soil, nutrient-poor soil, acid soil |
| <b>Spevnené plochy</b>     | Toleruje čiastočné spevnenie                                                 |
| <b>Zóna odolnosti</b>      | 2 (-45,5 do -40,1 °C)                                                        |
| <b>Odolnosť voči vetru</b> | moderate to good, no sea wind                                                |
| <b>Ostatná odolnosť</b>    | Odolné mrazu (WH 1-6)                                                        |
| <b>Použitie</b>            | úzke ulice, malé záhrady                                                     |
| <b>Tvar</b>                | Vetvený                                                                      |

FASTIGIATA JOES is a columnar birch with a tighter crown shape than 'Fastigiata'. The upright twigs are straighter, thicker and therefore sturdier than in 'Fastigiata', giving the tree a more robust appearance. The crown is quite dense (for a birch) and the twig tops do not hang down as much as in 'Fastigiata'. Already within a few years, the striking grey-white trunk is visible. This forms a good combination with the dark green foliage of FASTIGIATA JOES.

Handsome cultivar that is widely applicable in parks, gardens, streets and avenues. Because of its shape, it is also very suitable for narrow profiles, in shopping centres and residential areas. FASTIGIATA JOES was found by John de Lepper, Hulsel, the Netherlands and introduced in 2014. Hardiness zone 2
