

## Castanea sativa 'Anny's Summer Red'

|                            |                                                                                             |
|----------------------------|---------------------------------------------------------------------------------------------|
| Výška                      | 6 - 8 m                                                                                     |
| Šírka                      | 4-6m                                                                                        |
| Koruna                     | round, half-open crown                                                                      |
| Kôra a vetvy               | young twigs green, purplish red on emerging, bark (greyish) brown with longitudinal grooves |
| Listy                      | elongated, 10 - 25 cm, shiny dark green, serrated                                           |
| Kvety                      | ? catkins green and inconspicuous, ? catkins cream, June/July, fragrant flowers             |
| Plody                      | spiky husk with 2 - 3 dark brown nuts (sweet chestnuts), edible fruits                      |
| Tŕne                       | Žiadny                                                                                      |
| Jedovatosť                 | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                                         |
| Typ pôdy                   | airy, fertile, humic soil                                                                   |
| Spevnené plochy            | Netoleruje spevnené plochy                                                                  |
| Zóna odolnosti             | 6 (-23,3 do -17,8 °C)                                                                       |
| Odolnosť voči vetru        | good                                                                                        |
| Ostatná odolnosť           | Odolné mrazu (WH 1-6), Odolné vetru                                                         |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1-6), Odolné vetru, Cenné pre motýle                                       |
| Tvar                       | Vysokokmeň, Vetvený                                                                         |
| Pôvod                      | A.F. van Nijnatten, Zundert, Netherlands                                                    |

Small tree with a round crown that grows significantly slower and remains smaller than the species. The shoots are conspicuously purplish red on emerging, as is the young leaf. The leaves turn shiny dark green later. In autumn, the leaves turn golden yellow to brownish-yellow. The male flower catkins are cream and conspicuous. The female catkins are significantly shorter, green and inconspicuous. The fruits (sweet chestnuts) are edible. Prefers airy, humic soil.
