

Catalpa ×erubescens 'Purpurea'

Výška	10 - 12 (15) m
Šírka	6-10m
Koruna	wide pyramidal, later ovoid to round, half-open crown
Kôra a vetvy	grey, shallow fissured
Listy	heart-shaped, purplish-red, later dark green, 13 - 18 cm
Kvety	white, in large erect panicles, July/August (September)
Plody	thin capsules, to 35 cm long
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	few requirements, not in wet soils
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6a (-23,3 do -20,6 °C)
Odolnosť voči vetru	moderate to poor
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Cenné pre včely (medonosné)
Tvar	Vysokokmeň, Viackmeň
Pôvod	A. Waterer, England, before 1886

An average-sized tree with a half-open crown, which is pyramidal initially, but later ovoid to round-headed. The hard wood of the twigs breaks easily. The acuminate and entire, ovate leaf appears late in spring and it is dark purplish-red to almost black. Also the young twigs are dark in colour. In summer the leaf turns dark green, it is slightly smaller than of *C. erubescens* and is shed relatively early. The white, tubular flowers are smaller than of *C. bignonioides* and appear in erect, long panicles of 25 to 35 cm. Inside the flowers are yellow and have small brown spots. They are followed by long, capsules that are 1 cm thick at the most. These persist during winter.
