

## Celtis sinensis

|                            |                                                                                             |
|----------------------------|---------------------------------------------------------------------------------------------|
| <b>Výška</b>               | 15 - 20 m                                                                                   |
| <b>Šírka</b>               | 10-15m                                                                                      |
| <b>Koruna</b>              | umbel-shaped to round, half-open crown                                                      |
| <b>Kôra a vetvy</b>        | twigs (reddish) brown, bark grey, smooth                                                    |
| <b>Listy</b>               | elliptical to ovate, 3 - 10 cm, tip pointed or tapering                                     |
| <b>Kvety</b>               | green, inconspicuous, April/May                                                             |
| <b>Plody</b>               | round drupe, green to orange-red or black, 0.5 - 1 cm, single or in clusters of up to three |
| <b>Trne</b>                | Žiadny                                                                                      |
| <b>Jedovatosť</b>          | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                                         |
| <b>Typ pôdy</b>            | well drained soil, tolerates drought                                                        |
| <b>Pôdna vlhkosť</b>       | Vhodné do suchých pôd                                                                       |
| <b>Spevnené plochy</b>     | Toleruje spevnenie                                                                          |
| <b>Zóna odolnosti</b>      | 7a (-17,7 do -15,0 °C)                                                                      |
| <b>Odolnosť voči vetru</b> | slightly susceptible                                                                        |
| <b>Použitie</b>            | priemyselné oblasti                                                                         |
| <b>Tvar</b>                | Vysokokmeň                                                                                  |
| <b>Pôvod</b>               | Eastern China, Korea, Japan, Taiwan                                                         |

Unremarkable large tree with a semi-open, umbel-shaped to round crown. As with many *Celtis* varieties, the first-year twigs can be strikingly long. They are brown to reddish brown, sometimes a little hairy. The older bark is smooth and grey. The leaves feel somewhat papery; the margin is toothed/serrated from the middle to the tip. The inconspicuous flower clusters are followed by red drupes. These can vary in colour from green to orange-red or black. Like many *Celtis* varieties, it is a warmth-loving plant that grows noticeably faster in a warm, dry environment than in a cold, wet climate. Prefers well-drained soil. Can tolerate drought and air pollution.
