Medium-size to large tree in the wild, but usually a large, multi-stemmed shrub when cultivated. The trunks grow fairly steeply to form the broad, vase-shaped crown. The nearly round leaves are a glossy dark green, turning bright yellow in autumn. They feel rather thick and leathery. The flowers often appear before the leaves develop. They are purplish pink to light purplish red and stand in compact clusters. *C. chinensis* closely resembles *C. canadensis* but has thicker leaves that are always hairless, and has darker, large flowers. This warmth-loving tree prefers a loamy or fertile, moist but not too wet, calcareous soil in full sun.
