

Cercis siliquastrum

Výška	6 - 10 m
Šírka	6-10m
Koruna	round, half-open crown
Kôra a vetvy	grey, only when mature shallow grooves
Listy	round to kidney-shaped, green, 4 - 9 cm
Kvety	purple pink, in clusters, May
Plody	flat, brown pod, to 12 cm long
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcareous sandy or loamy soils
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Cenné pre včely (medonosné)
Tvar	Vysokokmeň, Viackmeň
Pôvod	West Asia, eastern Mediterranean

A native of the regions around the Mediterranean where it grows from a tall shrub into a multiple-stemmed tree. The crown is irregularly round and becomes wide. The trunk is grey and remains smooth for a long time, later with shallow fissures. The wide leaf is round to kidney-shaped with a blunt tip. The tree has a rich inflorescence before the leaf appears. The flowers are in compact clusters on old twigs, branches and trunk. The pods persist all winter. Is deep rooting with a coarse root system. Cercis siliquastrum can be applied very well as a climber against a south wall. Young specimen are susceptible to frost. This tree is tolerant to drought.
