

Cornus asperifolia var. drummondii

Výška	4-7 m
Šírka	4-6m
Koruna	round/spherical, dark, dense crown
Kôra a vetvy	brown
Listy	green
Kvety	yellowwhite, flowers in May
Plody	white, blue
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, acid soil, calcareous soil
Pôdna vlhkosť	Vhodné do suchých pôd, Odolné voči krátkodobému zaplaveniu
Spevnené plochy	Toleruje čiastočné spevnenie
Zóna odolnosti	5 (-28,8 do -23,4 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Tvar	Vysokokmeň
Synonymum	Cornus drummondii

Usually a large, round shrub but eventually growing into a small tree. The twigs are initially purple, turning green-grey after 3 years. The drummondii variety is typified by its leaves, which are hairier and have a more elongated tip. The flowers are grouped in erect, umbel-shaped corymbs of about 8 cm. The individual flowers are small and yellowish white. They open in early summer. The berry-like fruits are pale blue to white. Grows wild in scrub, clay banks and thinly wooded areas, also in dry riverbeds. Tolerates a lot of water for a while.
