

Cornus controversa 'Pagoda'

Výška	6 - 8 (15) m
Šírka	6-8m
Koruna	round, branching in layers, half-open crown, capricious growing
Kôra a vetvy	green with shallow grooves
Listy	broad ovate to broad oval, 8 - 15 cm long, dark green
Jesenné sfarbenie	Červená, Fialová
Kvety	creamy-white, in 15 cm umbel-shaped corymbs, May/June
Plody	small dark-blue berry
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	any, if well-drained, except dry sandy soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Alphons van der Bom, Oudenbosch, Netherlands, circa 1980

Small tree with branches rising in successive horizontal layers. 'Pagoda' was specially selected for its good, regular habit. The crown eventually becomes as broad as it is tall. The young twigs turn from reddish brown to greenish brown. The leaf is irregular in shape and glossy dark green. In autumn it turns purplish red. Because the leaves curl up a little in autumn, their conspicuously light undersides become clearly visible. The large, umbel-shaped flower corymbs can be followed by small, dark blue berries. However, the fruit yield is very variable and certainly not guaranteed. Shallow rooting with a fine root system. Lends itself well to pruning to create an arbour. Because the sap starts flowing early in the year, pruning should be done in summer or autumn.
