

Cornus kousa

Výška	4 - 8 m
Šírka	4-8m
Koruna	wide vase-shaped to round, half-open crown, capricious growing
Kôra a vetvy	grey, later slightly flaking
Listy	ovate to oval, dark green, 5 - 9 cm
Jesenné sfarbenie	Žltá, Oranžová, Červená
Kvety	green yellow in heads, bracts white, May/June
Plody	strawberry-like, compound-grown stone fruit, red
Trne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	well-drained soils
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	Japan, Korea and central China
Synonymum	Benthamia japonica

Starts as a shrub and grows into a multiple-stemmed tree. Grows in the wild in the mountain forests of China, Japan and Korea. Width of the crown circa 4 - 5 m. The growth is slow, especially when maturing. The leaf is dark green and slightly curved. The underside is blue green and a little bit hairy; the autumn colouring has yellow and scarlet red hues. Each head has inconspicuous flowers and has 4, circa 8 cm large, bracts that are creamy white to bright white in colour. In full bloom particularly decorative. The red, strawberry-like fruits are circa 2 cm across and have stalks that are 4 cm long and red coloured. The plant is shallow rooting with a fibrous root system. Requires a rich soil with a high humus content. Tolerates more drought and is slightly stronger than C. florida. There are several good cultivars, usually selected from the species chinensis.
