

Cornus nuttallii

Výška	6 - 8 m
Šírka	4-6m
Koruna	round, sometimes conical, half-open crown, capricious growing
Kôra a vetvy	red brown to grey, flaking in small plates
Listy	wide ovate to oval, green, 6 - 12 cm
Jesenné sfarbenie	Žltá, Oranžová
Kvety	green yellow in heads, inconspicuous, bracts white, May
Plody	ovate berry-like stone fruits, Ø 1 cm, bright red
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	soil rich in humus content and moisture-retentive
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	7a (-17,7 do -15,0 °C)
Odolnosť voči vetru	moderate
Stromy pre zvieratá a hmyz	Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Vetvený, Viackmeň
Pôvod	western part of North America

Large upright shrub that is also grown as a tree. It has an upright habit and becomes less wide than other Cornus species. Young twigs are green but turn to brown red rapidly. Mature trunks have a red brown to grey colour. The green leaf turns yellow to orange red in autumn. The flowers are inconspicuous. However, each head with flowers has 6 (sometimes 4 or 8) ovate, pointed bracts. These turn from creamy white to uniformly white with, sometimes, a pink hue. They can get more than 10 cm big. This makes the plant in full bloom very decorative. The circa 1 cm large, orange red fruits appear in early autumn. The plant is shallow-rooting with a delicate root system and requires shielding from a cold east wind. Cornus nuttallii is named after Thomas Nuttall who carried out research and wrote publications on the flora of North America in the early 19th century.
