

Cornus officinalis 'Robin's Pride'

Výška	4-6 m
Šírka	3-5m
Koruna	oval, dark, dense crown, capricious growing
Kôra a vetvy	flaking, brown, grey
Listy	green
Jesenné sfarbenie	Cervená
Kvety	yellow, flowers in February
Plody	edible fruits, red
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	clay soil, loamy soil, sandy soil, calcareous soil
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	6b (-20,5 do -17,8 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1-6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1-6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, malé záhrady, dvory
Tvar	Vysokokmeň, Viackumeň

'Robin's Pride' is a small tree that forms a continuous heart branch and eventually develops a dense, oval crown 4-7 m tall. The young twigs are brown. The older bark is grey-brown and exfoliates beautifully olive-green, which is an important ornamental value of *C. officinalis*. The leaves are dark green and turn red in autumn. Like the species, 'Robin's Pride' flowers in small umbels of pale yellow flowers in February-March. The flowers can be followed by glossy red, oval, edible fruits.

Cornus officinalis prefers clay, loamy and sandy soil, preferably calcareous. 'Robin's Pride' has the same requirements. The tree tolerates drought well. Its slender form makes it suitable for use as a street tree, also in narrower profiles. Also suitable for use as a park tree, in gardens, cemeteries, and in roof gardens. Hardiness zone 6b
