

## Crataegus ×grignonensis

|                            |                                                        |
|----------------------------|--------------------------------------------------------|
| Výška                      | 5 - 6 m                                                |
| Šírka                      | 3-4m                                                   |
| Koruna                     | broad vase-shaped, half-open crown, capricious growing |
| Kôra a vetvy               | greyish-brown branches, seldom thorny                  |
| Listy                      | oval to ovoid, somewhat leathery, dull green, 3 - 7 cm |
| Kvety                      | in umbels, while to pale pink, May/June                |
| Plody                      | round, Ø approx. 1.5 cm, glossy reddish-brown          |
| Tríne                      | Áno                                                    |
| Jedovatosť                 | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá    |
| Typ pôdy                   | makes few demands, preferably not too dry              |
| Spevnené plochy            | Netoleruje spevnené plochy                             |
| Zóna odolnosti             | 5a (-28,8 do -26,1 °C)                                 |
| Odolnosť voči vetru        | moderate                                               |
| Ostatná odolnosť           | Odolné mrazu (WH 1–6)                                  |
| Stromy pre zvieratá a hmyz | Odolné mrazu (WH 1–6), Plody ako potrava pre vtáctvo   |
| Použitie                   | bulváre a široké ulice                                 |
| Tvar                       | Vysokokmeň                                             |
| Pôvod                      | France, circa 1873                                     |

This cross between *C. crus-galli* and *C. pubescens* grows into a small tree approx. 6 m tall with a dense and broad vase-shaped crown. The greyish-brown branches are practically without thorns. The oval to ovoid leaves have 2 - 4 lobes and are slightly leathery. The upper side is dull dark green, the underside light green. In the autumn the leaves remain a long time on the tree, often until well into December. White flowers in umbels appear in May and June. They are followed by glossy reddish-brown fruits approx. 1.5 cm in diameter. They stay on the tree until the first frost. The tree needs good anchoring because of its weak root system. Preferably on wind-free sites in parks and small streets.
