

Crataegus ×persimilis

Výška	5 - 8 m
Šírka	5-8m
Koruna	flattened spherical, half-open crown, capricious growing
Kôra a vetvy	bark greyish-brown, somewhat grooved, smooth brown branches
Listy	broad oval, glossy dark green, 5 - 10 cm
Jesenné sfarbenie	Oranžová, Červená
Kvety	white, in umbels, May/June
Plody	round, bright red, abundant
Tríne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	does not stand up to wet soil.
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5a (-28,8 do -26,1 °C)
Odolnosť voči vetru	good
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Plody ako potrava pre vtáctvo
Použitie	malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	unknown, cultivated in Europe since the 18th century
Synonymum	Crataegus x prunifolia

A small tree with a broad flattened crown. Height and breadth eventually approx. 7 m. The widely-spreading branches are covered with slightly curved thorns, size approx. 4 - 5 cm. The trunk and branches are greyish-brown. The leaves are glossy dark green, have a sharply serrated edge and turn flaming orange to red in the autumn. C. persimilis produces an abundance of white flowers in felt-like umbels that are followed by abundant fruit in the autumn. The fruits are approx. 1 cm in diameter and they remain on the tree for a long time. They all fall at the same time, which can be inconvenient in paved areas. The root system consists of a few deeply penetrating roots with few hair roots. Shows good resistance to frost and dry conditions. Its low branches make it less suitable for streets.
