

## Elaeagnus angustifolia

Áno

Výška	4 - 8 (12) m
Šírka	4-8m
Koruna	oval round, open, half-open crown, capricious growing
Kôra a vetvy	greyish green bark, shallow grooves, twigs silvery with thorns
Listy	lanceolate, matted green, silvery grey underneath, 3 - 9 cm
Kvety	1 to 3 together, silvery-yellow, May/June, fragrant flowers
Plody	oval, yellow drupe, edible, Ø approx. 1 cm
Tríne	Áno
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	calcareous sandy soil, preferably dry
Pôdna vlhkosť	Vhodné do suchých pôd
Spevnené plochy	Toleruje spevnenie
Zóna odolnosti	3 (-40,0 do -24,5 °C)
Odolnosť voči vetru	good, suitable for coastal areas
Ostatná odolnosť	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli
Stromy pre zvieratá a hmyz	Odolné mrazu (WH 1–6), Odolné vetru, Odolné posypovej soli, Plody ako potrava pre vtáctvo
Použitie	stromy do nádob, strešné záhrady, pobrežné zóny, priemyselné oblasti, malé záhrady, dvory
Tvar	Vysokokmeň, Viackmeň
Pôvod	Mediterranean area to Western and Central Asia

High, loosely growing shrub that ultimately grows to become a small, multi-trunked tree. Naturally occurring in dry places such as dunes and dry riverbeds. It can sometimes grow up to 12 m there. Growth is irregular, with thin twigs that fan out. Has an open crown shape that can grow to a width of approx. 5 - 7 m. The twigs turn from a silvery grey to reddish brown colour. Often bears strong thorns. The matted green, lanceolate leaves are 3 - 9 cm long and approx. 2.5 cm wide. The velvety underside is a striking silvery white colour. The bell-shaped flowers, approx. 1 cm in size, sometimes grow in clusters of 2 to 3 together. They have a strong aroma and are followed by olive-shaped, yellow drupes. They are edible and taste slightly sweet. Prefers a light and sunny, calcareous site. Suitable for industrial areas. Tolerates de-icing salt.
