

Fagus sylvatica 'Pendula'

Výška	20 - 25 m
Šírka	25-35m
Koruna	wide weeping, dark, dense crown, capricious growing
Kôra a vetvy	grey, smooth, soft bark
Listy	oval to ovate, dark green, 4 - 10 cm
Jesenné sfarbenie	Žltá
Kvety	small inconspicuous flower catkins, May
Plody	nuts, in capsule with brush-like spines, 1 - 2 cm
Tríne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	well-drained, rich in humus content, not too wet
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Tvar	Vysokokmeň, Vetvený
Pôvod	England, 1836

An ornamental, spreading beech with undulating upwardly growing branches. From these, floppy limbs droop down vertically, sometimes almost touching the ground. 'Pendula' can attain a height of 20 - 25 m. In the first years the growth rate is somewhat slow, later it becomes stronger. The soft bark is smooth and grey. The oval to ovate leaves are shiny dark green and 4 - 10 cm in size, in autumn they turn to yellow. Inflorescence with small, inconspicuous flower catkins that are followed by 1 - 2 cm large nuts in a bristled capsule. 'Pendula' is a graceful, specimen tree that with age displays an impressive appearance. It prospers in soil that is not too wet, well-drained and rich in humus content. Moderate wind resistance.
