

Fagus sylvatica 'Purpurea Tricolor'

Výška	10-15 m
Šírka	6-8m
Koruna	round/spherical, dark, dense crown
Kôra a vetvy	grey
Listy	variegated
Jesenné sfarbenie	Červená
Kvety	yellowgreen, flowers in May
Plody	brown
Tŕne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1-6)
Tvar	Vysokokmeň, Vetvený
Synonymum	Fagus sylvatica var. roseomarginata

Fagus sylvatica 'Purpurea Tricolor' (syn. F.s. roseomarginata) has a spreading, open crown and attains a height of 10 - 15 m. It is conspicuous due to its peculiar leaf colour. The oval to ovate leaves are purple red at first. Later they get pink and creamy margins that have various widths. During the summer months the purple-red colour changes to brown purple. Size of the leaf is 4 - 9 cm. Moisture-retentive soil prevents scorching by the sun. Blooms inconspicuously. Park tree preferring well-drained soil, rich in humus content. Moderate wind resistance. Winter hardiness zone: 5b
