

Fagus sylvatica 'Quercifolia'

Výška	20 m
Šírka	18-20m
Koruna	round/spherical, dark, dense crown
Kôra a vetvy	grey
Listy	green
Jesenné sfarbenie	Žltá
Kvety	yellowgreen, flowers in May
Plody	brown
Térne	Žiadny
Jedovatosť	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
Typ pôdy	loamy soil, sandy soil, peaty soil, calcareous soil
Spevnené plochy	Netoleruje spevnené plochy
Zóna odolnosti	5b (-26,0 do -23,4 °C)
Odolnosť voči vetru	moderate
Ostatná odolnosť	Odolné mrazu (WH 1–6)
Tvar	Vysokokmeň, Vetvený

Fagus sylvatica 'Quercifolia' is a fairly tall tree with a spreading spherical crown. Height circa 20 m. The green leaf has some resemblance with that of the oak (Quercus). It is ovate to oblong and has short, wide lobes. The margin is sometimes toothed. The leaf has a very regular shape and turns yellow brown in autumn. Inconspicuous flowering. 'Quercifolia' thrives in soil that is not too wet, well-drained and rich in humus content. Suitable as a park tree and a solitary. Moderate wind resistance. Winter hardiness zone: 5b
