Fagus sylvatica 'Rohan Trompenburg' is a seedling from 'Rohanii'. Height 10 - 15 m, shape of crown is round. The brown-red leaf is oblong-ovate and moderately to deeply dissected with rounded lobes. With regard to its leaf 'Rohan Trompenburg' resembles 'Rohanii', but it grows distinctly stronger. Sometimes the leaf assumes the shape of 'Grandidentata'. The leaf unfolds bright red, slightly sooner than F. sylvatica, leaf size 4 - 10 cm. Also the second shoot is strikingly red coloured. Park tree or solitary. Winter hardiness zone: 5b
