

## Fagus sylvatica 'Verzy'

|                            |                                                                           |
|----------------------------|---------------------------------------------------------------------------|
| <b>Výška</b>               | 6 m                                                                       |
| <b>Šírka</b>               | 5-7m                                                                      |
| <b>Koruna</b>              | round to broad vase-shaped, dark, dense crown, capricious growing         |
| <b>Kôra a vetvy</b>        | smooth, grey bark, soft                                                   |
| <b>Listy</b>               | oval to ovate with somewhat undulate margin, glossy dark green, 4 - 10 cm |
| <b>Kvety</b>               | small, inconspicuous flower catkins, may                                  |
| <b>Plody</b>               | nuts, in cupules covered with brushy spines, 1 - 2 cm                     |
| <b>Trne</b>                | Žiadny                                                                    |
| <b>Jedovatosť</b>          | Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá                       |
| <b>Typ pôdy</b>            | well drained, humic soil, not too wet                                     |
| <b>Spevnené plochy</b>     | Netoleruje spevnené plochy                                                |
| <b>Zóna odolnosti</b>      | 5b (-26,0 do -23,4 °C)                                                    |
| <b>Odolnosť voči vetru</b> | moderate                                                                  |
| <b>Ostatná odolnosť</b>    | Odolné mrazu (WH 1–6)                                                     |
| <b>Použitie</b>            | malé záhrady                                                              |
| <b>Tvar</b>                | Vysokokmeň, Vetvený                                                       |
| <b>Pôvod</b>               | Bois de Verzy, Verzy, France                                              |

Small, round to broadly vase-shaped tree with a somewhat irregular growth pattern, up to about 6 m. The branches wind and turn oddly. The soft bark is smooth and grey. The leaves are glossy dark green and have a rather less undulate margin than typical of the species. They measure 4 - 10 cm. The leaf becomes more matt green later in summer. The blossom and fruits are the same as other *F. sylvatica*; inconspicuous flower catkins followed by 1 - 2 cm nuts in cupules covered with brush-like spines. Suitable as solitary, park tree or in gardens. Prefers well-drained, humic soil, not too wet. Moderately wind resistant. Was selected from a wild beech population.
