

## Hamamelis ×intermedia

<b>Výška</b>	4 m
<b>Šírka</b>	3-4m
<b>Koruna</b>	broad vase-shaped to round, dark, dense crown, capricious growing
<b>Kôra a vetvy</b>	brown, smooth
<b>Listy</b>	obovate, slightly glossy dark green, 10 - 15 cm
<b>Jesenné sfarbenie</b>	Žltá, Červená, Fialová
<b>Kvety</b>	with 4 very narrow petals, light yellow to purplish red, in compact clusters, december/march
<b>Plody</b>	dry capsule, dark brown
<b>Tríne</b>	Žiadny
<b>Jedovatosť</b>	Zvyčajne nie je jedovaté pre ľudí a väčšie zvieratá
<b>Typ pôdy</b>	slightly acidic, moist but well-drained soil, cannot tolerate wet soil
<b>Spevnené plochy</b>	Netoleruje spevnené plochy
<b>Zóna odolnosti</b>	6b (-20,5 do -17,8 °C)
<b>Odolnosť voči vetru</b>	moderate
<b>Ostatná odolnosť</b>	Odolné mrazu (WH 1–6)
<b>Použitie</b>	stromy do nádob, malé záhrady, dvory
<b>Tvar</b>	Vysokokmeň, Viackmeň
<b>Pôvod</b>	Alfred Rehder, 1945

Large, broad shrub up to 4 m tall, with dense, rather tangled branches. The brown bark remains smooth even when mature. The leaves of young plants can measure up to 20 cm. The flowers grow in compact clusters of axillary racemes. The individual flowers grow to over 4 cm, varying in colour from light yellow to purplish red, depending on the cultivar. *H. x intermedia* originated from a cross of *H. mollis* and *H. japonica*. This hybrid was generated independently at various places in the world. Alfred Rehder described the hybrid first, based on a plant in the Arnold Arboretum in the USA. There are many cultivars under cultivation. The hybrid, *H. x intermedia*, is not grown as such.
